SKILLS SUMMARY

Languages:	JavaScript (ES6+), C, C++, HTML5, CSS3, SQL
Frameworks & Libraries:	React.js, Next.js 16, Node.js, Express.js, Vite, Tailwind CSS, Recharts, Nodemailer, Axios
Databases:	MongoDB, Mongoose
Cloud / DevOps:	Vercel, Git, GitHub Actions, Linux
Developer Tools:	VS Code, Postman, Google Apps Script, Google Sheets API, npm
Core Subjects:	Data Structures & Algorithms, Operating Systems, DBMS, Computer Networks, OOP, System Design
Soft Skills:	Problem Solving, Adaptability, Leadership

PROJECTS

RecordHub – Full-Stack Competition Tracker & Developer Portfolio GitHub Live	Mar 2026 – Apr 2026
- Architected a full-stack platform using Next.js 16 App Router & React 19 for developers to track 10+ competition metrics, problem-solving history, and publish verified portfolios, with responsive UI layouts using Tailwind CSS. - Implemented multi-method authentication with JWT in httpOnly cookies, bcrypt hashing, Google OAuth 2.0 SSO, and automated 6-digit OTP password reset via Nodemailer. - Built full CRUD contest lifecycle tracking with MongoDB/Mongoose models, indexed schemas, and responsive data aggregation pipelines; reduced profile load latency by 35%. - Designed an interactive Recharts analytics dashboard to visualize submission velocity, ratings, and performance trajectories, alongside custom modal workflows and dynamic multi-platform filtering across (LeetCode, CodeChef, and Hackathons). <i>Tech Stack: Next.js 16, React 19, Node.js, Express.js, MongoDB, Mongoose, JWT, Google OAuth 2.0, Tailwind CSS v4, Recharts, Vercel</i>	

OS File Locking & Concurrency Simulator GitHub	May 2026
- Engineered an OS synchronization simulator in C and JavaScript modeling Readers-Writer locks (Shared vs. Exclusive) with FIFO queues, eliminating thread starvation across 15+ concurrent processes. - Implemented O(V + E) two-level deadlock detection using DFS-based Resource Allocation Graph cycle traversal, combined with priority victim preemption for automated recovery. - Designed an interactive visual dashboard with real-time kernel-style event logs and live process-state visualization (Running, Blocked, Waiting) across distinct file descriptors, with dynamic lock-timeout thresholds.. - Built an automated stress-simulation engine evaluating lock contention, throughput, and turnaround time across 100+ concurrent file-access operations; optimized priority victim selection heuristics to reduce simulated transaction abort rates by 40% under heavy concurrency. <i>Tech Stack: C, JavaScript (ES6+), HTML5, CSS3, Graph Algorithms (DFS), OS Synchronization</i>	

Smart Flashcard & Interactive Quiz Engine GitHub Live	Sep 2025
- Developed an interactive Progressive Web App (PWA) with Service Workers enabling 100% offline availability and sub-100ms deck load times, featuring a lightweight responsive UI with dynamic progress counters and subject-level score metrics. - Integrated Google Apps Script & Google Sheets API as a headless CMS to dynamically fetch, parse, and filter 50+ curated cards across multiple subject categories. - Engineered O(n) Fisher-Yates shuffle randomization, 3D CSS flip animations using rotateY, and regex parsers supporting 4+ MCQ format options with instant feedback and zero-dependency vanilla JavaScript state management. - Built cross-device podcast study attachment integration and dynamic explanation rendering to enhance multi-modal self-learning, while maintaining responsive cross-device interaction. <i>Tech Stack: JavaScript (ES6+), HTML5, CSS3, Google Apps Script API, Service Workers, Web Manifest (PWA), Netlify</i>	

TRAINING

Data Structures Fundamentals: Basics to Applications LPU Certificate GitHub Live	Jun 2026 – Jul 2026
- Completed intensive summer training covering algorithmic complexity, linear and non-linear data structures (Arrays, Linked Lists, Stacks, Queues, Trees, Graphs, Binary Heaps), recursion, and searching/sorting. - Built Smart Blood Bank Management System applying core data structures to automate donor records, inventory tracking across 8 ABO/Rh blood groups, and emergency fulfillment. - Implemented in-memory Priority Queues & Binary Heaps (O(log n)) for triage request scheduling, Hash Tables for blood cross-matching, and secure JWT RBAC across 10+ REST endpoints. <i>Tech Stack: React, Vite, Node.js, Express.js, MongoDB, Mongoose, JWT, Tailwind CSS, Recharts, Axios, Vercel</i>	

CERTIFICATIONS

• Oracle Certified Foundations Associate — Agentic AI OCI AI	Aug 2026
• Programming Using C++ — Infosys Springboard	Aug 2025
• CyberSmart Awareness CSR Internship — WNS Cares Foundation	Aug 2025
• React.js Development — Tech Veda	Mar 2025

EXTRACURRICULAR ACTIVITIES

• Collaborated in a team at Code-A-Haunt 2.0 Hackathon among 500+ participants to deliver a full-stack platform Certificate	Feb 2025
---	----------

EDUCATION

Lovely Professional University	Punjab, India
Bachelor of Technology in Computer Science and Engineering — CGPA: 7.42	Aug 2024 – May 2028
Suditi Global Academy	Etawah, UP
Intermediate (Class XII) — Science (Physics, Chemistry, Mathematics) — 64.8%	2022 – 2023
Secondary School Examination (Class X) — 74.8%	2020 – 2021
